

Capital Rotation Report - 2026-06-15 (daily)

Generated by the rotation system. All numerical signals are model outputs, not predictions. Hedged language is enforced by ?4.5; high-confidence narratives are foregrounded, conflicting evidence is always listed.

Executive Dashboard

The 5-second read. Every row is detailed in a numbered section below - this is the decision summary, not new information.

Question	Answer
Current Market State	-
Regime Trajectory	-
Capital Flow Direction	Mixed / no clear rotation
Strongest Sector	-
Weakest Sector	-
5-Day SPY Outlook	insufficient analogue history
Recommended Risk Exposure	Maintain ->
Signal Confidence	-

Not investment advice. See ?2 (committee view) for the reasoning and ?14 (scorecard) for the model's historical track record.

Signal Inflection Monitor

What is changing. Investors make money from turning points, not static readings. Composite score 5 trading days ago vs now.

No 5-session-prior snapshot in the store yet - the monitor needs a week of signal history.

?/? = move >=20 pts over 5 sessions; ^/v = smaller move; -> = flat. D2RS = acceleration of relative strength, which turns before raw RS.

Section 1 - Overview

No narrative fired - every claim sat below the confidence floor or was suppressed by failed validation. See ?20 and ?25 for the raw scores and reasons.

No per-asset metrics for this date - flow tables omitted.

Where money is likely to go next (5d, from 20 closest analogues)

Insufficient analogue history for a conditional forecast.

How confident

- **Signal validation:** 0/8 pass . 0 fail . 8 undetermined (see ?20)
- Numbers above are model outputs, not predictions. Full detail in the sections that follow.

Section 2 - Investment Committee View

Bull Case

- (no signal crosses its bull threshold)

Bear Case

- (no signal crosses its bear threshold)

Net Assessment

- No analogue forecast available - qualitative lean from the evidence count above: **Neutral** (0 bull vs 0 bear).

Suggested Positioning

- Normal cash allocation

Caveat: 0 signal(s) fail and 8 are undetermined under IC validation - see the Forecast Scorecard and Detected Themes sections before acting on the lean above.

Model-derived positioning consistent with current signals - not investment advice. The probabilities are empirical analogue frequencies, not predictions.

Section 3 - Market Regime

Regime classifier has not yet been run for this date.

Section 4 - Capital Flow Dashboard

No metrics available.

Section 5 - Flow Map

No metrics available.

Section 6 - Leadership Rotation Tracker

No metrics available.

Section 7 - Rotation Strength

capital_rotation has no score for this date.

Section 8 - Capital Rotation - Pair Breakdown

No pair-block components recorded for this date.

Section 9 - Historical Analogues

No historical analogues found. (Not enough signal history, or today has missing signal values.)

Section 10 - Regime Transition Probabilities

Insufficient regime history to estimate transitions.

Section 11 - Where Money Likely Goes Next

No analogue-based forecast available (insufficient history).

Section 12 - Probabilistic Market Forecast

Insufficient historical analogues to produce a forecast.

Section 13 - Sector Forecast - Expected Leaders (Next 21 Days)

Insufficient historical analogue data for a sector forecast.

Section 14 - Forecast Scorecard - Actual vs Forecast

No forecasts recorded yet. Each daily run now persists its 5d/21d SPY outlooks and sector-leader forecast; hit rates appear here once horizons elapse. Backfill with rotate scorecard --backfill <start>...<end>.

Section 15 - Top Strengthening Assets

No metrics available.

Section 16 - Top Weakening Assets

No metrics available.

Section 17 - Sector / Bucket Breadth

No metrics available.

Section 18 - Volume Anomalies

No metrics available.

Section 19 - ETF Flow Analysis

Flow history accumulated: **1 day(s)**. The ?3.5 flow-z score requires >=60 days to normalize; until then deltas below are raw.

ETF	Source	Conf.	Shares Out	AUM (USD)	Net Flow (USD)
GLD *	yf_info_aum	0.70	260,300,000	\$150,367,518,720	-
HYG *	yf_info_aum	0.70	195,600,000	\$16,106,322,944	-
IWM *	yf_info_aum	0.70	281,049,984	\$80,933,363,712	-
QQQ *	yf_info_aum	0.70	393,100,000	\$493,987,528,704	-
SPY *	yf_info_aum	0.70	917,782,016	\$783,796,404,224	-
TLT *	yf_info_aum	0.70	109,700,000	\$42,895,949,824	-
2800.HK	shares_delta	0.60	3,155,990,016	\$79,657,187,281	-
2828.HK	shares_delta	0.60	345,543,722	\$29,854,978,076	-

* = priority issuer-direct ETF (SPY, QQQ, IWM, GLD, TLT, HYG).
Confidence 0.80 = SSGA holdings-derived; 0.70 = yf.info (issuer-published via Yahoo); 0.60 = Method B shares-delta proxy.

Section 20 - Detected Themes

Signal	Score	Confidence	Validation
Relative Strength	-	-	[pending] no_per_asset_rs_history
Relative Volume	-	-	[pending] no_spy_or_score_history
Capital Rotation	-	-	[pending] insufficient_history (n=0 < 500)
Risk On Off	-	-	[pending] insufficient_history (n=0 < 500)
Inflation	-	-	[pending] insufficient_history (n=0 < 500)
Growth	-	-	[pending] insufficient_history (n=0 < 500)
Recession	-	-	[pending] insufficient_history (n=0 < 500)
Liquidity	-	-	[pending] insufficient_history (n=0 < 500)

Section 21 - Signal Attribution

Each composite decomposed into its drivers. **Pts** rescales a driver's share of the pre-mapping aggregate into headline score points, so the column sums to the headline (liquidity: to its distance from the neutral 50). Largest |Pts| first.

No composite signals with scores for this date.

Section 22 - What Changed Since Yesterday

No comparable yesterday snapshot available in the store.

Section 23 - What Changed Since Last Week

No comparable last week snapshot available in the store.

Section 24 - What Changed Since Last Month

No comparable last month snapshot available in the store.

Section 25 - Potential Explanations

Generated by **deepseek-v4-flash** (1096 -> 27 tokens). Falls back to rule-based on API failure. Same ?4.5 anti-hallucination rules are enforced in the system prompt.

No narratives crossed the confidence floor (0.35). Signals are inconclusive.

Cross-signal flags:

- No signals available to assess conflicts.

Macro context (observable, FRED):

Policy, the curve and credit as a cross-check on the price-derived signals above - a regime call should not rest on price action alone.

- Fed funds target (upper bound) **3.75%** - roughly unchanged over ~1 quarter.
- Yield curve positively sloped (10y-2y +39 bps).
- HY credit spread (OAS) **2.78%**, little changed over 21d.
- 10-year breakeven inflation **2.31%** (falling).

Section 26 - Confidence Assessment

No confidences to assess.

Section 27 - Glossary

Only abbreviations actually used in this report are listed; the full universe glossary lives in `glossary.py`.

Metrics & signal short-forms

Term	Meaning
Bucket	Editorial group of related symbols (Technology = XLK+SMH; Crypto = BTC+ETH; etc.). Used by the Capital Flow Dashboard and Flow Map.
Rotation Strength	capital_rotation -> 0-100, with percentile vs trailing 252d. Tells you how unusual today's rotation magnitude is.
Relative Strength	Cross-sectional z of blended-horizon return; headline is the top z asset (per-asset values in the components).
Relative Volume	Universe-level activity score (0-100). High = aggregate volume well above 30-day baseline.
Capital Rotation	5-pair block momentum spread (equities-vs-bonds, growth-vs-defensives, semis-vs-staples, US-vs-international, crypto-vs-gold). Positive = rotation into risk.
Risk On Off	Risk-on basket (SPY, QQQ, IWM, EEM, BTC-USD, HYG) minus risk-off basket (TLT, GLD, UUP, FXF). Mapped to +/-100 via tanh. Positive = risk-on.
Inflation	Weighted z of copper/oil/gold/silver/bonds returns + breakeven if available. Positive = inflation rising.
Growth	Growth leaders (SMH, XLI, IYT, CPER, EEM) minus laggards (XLP, XLU, TLT). Positive = growth accelerating.
Recession	Yield curve proxy + HYG/LQD credit spread + XLY/XLP + IYT trend + UUP trend, signed toward recession. Slow signal at daily frequency.
Liquidity	0-100 magnitude composite of UUP-inv + SPY-vol-inv + BTC + MOVE-inv + RRP-inv (the last two are added when MOVE / FRED are wired).

Tickers referenced

Ticker	Description
2800.HK	Tracker Fund of Hong Kong - Hang Seng Index ETF.
2828.HK	Hang Seng China Enterprises ETF (HSCEI / H-shares index).
GLD	SPDR Gold Shares - physical gold price proxy.
HYG	iShares iBoxx \$ High Yield Corporate Bond ETF - credit risk-on tell.
IWM	iShares Russell 2000 ETF - US small-cap (size factor / domestic-cyclical tell).
QQQ	Invesco QQQ Trust - Nasdaq-100 (tech-heavy growth proxy).
SPY	SPDR S&P 500 ETF - US large-cap equity (the headline US risk read).
TLT	iShares 20+ Year Treasury Bond ETF - long duration; safe-haven and curve-flattener proxy.
