

Hong Kong Rotation Report - 2026-06-15 (daily)

Greater China / HKEX-listed universe. Independent of the US report but section-aligned with it: same numbering, same titles. Sections that require composite-signal history are marked n/a - those remain US-panel concepts for now.

Executive Dashboard

The 5-second read for the HK / Greater China book. Every row is detailed in a numbered section below - decision summary, not new information. HK has no composite-signal or analogue layer, so the rows are RS- and flow-based.

Question	Answer
Current Market State	Undetermined (conf. -)
Capital Flow Direction	Risk-on bid
Strongest Sector	HK Financials (+1.78%)
Weakest Sector	HK Energy (-7.88%)
Likely Leader (20D, heuristic)	-
Likely Laggard (20D, heuristic)	-
Universe Breadth (weekly)	53% advancing
HKEX Session	2026-06-15

Not investment advice. Likely Leader / Laggard are the ?11 heuristic Leadership Persistence extremes - a continuation leaning, not a validated forecast.

Signal Inflection Monitor

What is changing in HK leadership. HK has no composite signals, so this tracks RS momentum: the fastest accelerating / decelerating names by D2RS (5-session acceleration of relative strength).

Insufficient RS history for acceleration (needs >=10 sessions).

Section 1 - Overview

Regime: Undetermined . benchmark (2800.HK) r_m - . confidence - . HKEX session 2026-06-15

Top observation (rules): The data is consistent with capital rotating out of **HK Energy** (-7.88% r_w) into **HK Financials** (+1.78% r_w).

Where money is leaving (week to date)

Bucket	r_w	Members
HK Energy	-7.88%	0857.HK, 0883.HK
HK Internet	-1.48%	0700.HK, 1810.HK, 3690.HK, 9618.HK, 9888.HK, 9988.HK

Where money is entering (week to date)

Bucket	r_w	Members
HK Financials	+1.78%	0005.HK, 0388.HK, 0939.HK, 1398.HK, 2318.HK
HK Broad	+0.82%	2800.HK, 2828.HK

Where money is likely to go next

n/a - HK analogue engine requires >=1 year of HK composite-signal history, which doesn't exist yet (HK has no native risk-on/off, rotation, growth, etc. composites). Strategic item; see the design notes.

How confident

- Rotation Strength:** insufficient HK history (<30 sessions)
- Universe breadth (weekly):** 53% of 15 HK names advancing
- Data coverage:** 15/15 HK names have a bar on the latest HKEX session

Numbers above are model outputs, not predictions. Full detail in the sections that follow.

Section 2 - Investment Committee View

Bull Case

- HK Financials attracting capital (r_w +1.78%)

Bear Case

- Money leaving HK Energy (r_w -7.88%)

Net Assessment

- Qualitative lean: **Neutral / Mixed** (1 bull vs 1 bear inputs). No probability weighting - that requires the HK forecast layer (?9-?14 are n/a until it ships).

Suggested Positioning

- Overweight HK Financials, HK Broad
- Underweight HK Energy, HK Internet

Model-derived positioning consistent with current HK metrics - not investment advice.

Section 3 - Market Regime

Current: Undetermined
Confidence: -

- Benchmark (2800.HK, Hang Seng tracker) r_m: -
- Universe weekly breadth: 53% advancing

Trend heuristic (benchmark monthly return + breadth), not the US report's signal-median regime classifier - HK composite signals are not computed yet.

Section 4 - Capital Flow Dashboard

Aggregated weekly return (r_w) by bucket. >=50 bps = directional; below that the bucket is flat and excluded from the rotation call.

Money Entering (week to date)					
Bucket	r_w	r_m	breadth (adv %)	members	
HK Financials	+1.78%	-	80% (5)	0005.HK, 0939.HK, 2318.HK	0388.HK, 1398.HK,
HK Broad	+0.82%	-	100% (2)	2800.HK, 2828.HK	
Money Leaving (week to date)					
Bucket	r_w	r_m	breadth (adv %)	members	
HK Energy	-7.88%	-	0% (2)	0857.HK, 0883.HK	
HK Internet	-1.48%	-	33% (6)	0700.HK, 3690.HK, 9888.HK,	1810.HK, 9618.HK, 9988.HK

Section 5 - Flow Map

MONEY LEAVING

HK Energy (-7.88%) ##### ->

HK Internet (-1.48%) ## ->

MONEY ENTERING

HK Financials (+1.78%)

HK Broad (+0.82%)

Bar width is proportional to |r_w| within this report. Top 5 each side.

Section 6 - Leadership Rotation Tracker

Insufficient RS history to classify leadership.

Section 7 - Rotation Strength

Insufficient history to score rotation strength (need >=30 sessions).

Section 8 - Capital Rotation - Pair Breakdown

Score = weekly-return spread (left - right) in percentage points. US metrics unavailable - cross-market rows show -. Positive = left side outperforming.

Pair				Left r_w	Right r_w	Spread	Interpretation
HK Financials	Internet	vs	HK	-1.48%	+1.78%	-3.26pp	Growth/platform bid vs value/SOE banks
HK Energy	Internet	vs	HK	-1.48%	-7.88%	+6.40pp	New-economy bid vs old-economy SOEs
HK Energy	Financials	vs	HK	+1.78%	-7.88%	+9.66pp	Banks/insurers vs oil SOEs
HK Technology	Internet	vs		-1.48%	-	-	HK internet platforms vs US tech
HK Internet	Internet	vs	China	-1.48%	-	-	HKEX listings vs US-listed KWEB proxy
HK Cap	Broad	vs	US Large	+0.82%	-	-	Hang Seng trackers vs SPY/QQQ
HK Financials	Financials	vs		+1.78%	-	-	HK banks/insurers vs XLF

Raw r_w spreads, not z-scored pair blocks like the US capital_rotation signal - read the sign and relative magnitude, not the absolute level. A persistently positive HK Internet - US Technology spread is the classic 'rotation into Chinese tech' tell.

Section 9 - Historical Analogues

Requires HK-native composite-signal history, which is not computed yet - the 8 composite signals, regime history and analogue engine are NYSE-panel concepts. See the same section in the US report; HK-native signals are tracked as a strategic item in the design notes.

Section 10 - Regime Transition Probabilities

Requires HK-native composite-signal history, which is not computed yet - the 8 composite signals, regime history and analogue engine are NYSE-panel concepts. See the same section in the US report; HK-native signals are tracked as a strategic item in the design notes.

Section 11 - Where Money Likely Goes Next

Heuristic Leadership Persistence forecast (next ~20 HKEX sessions) - **not** the analogue engine. Names ranked by a weighted blend of RS rank (level), DRS (5d velocity) and D2RS (5d acceleration), each z-scored across the HK universe. Momentum and acceleration tend to persist; treat as a leaning, not a prediction.

Insufficient RS history across the HK universe for a persistence ranking (needs DRS and D2RS - >=10 sessions).

Section 12 - Probabilistic Market Forecast

Requires HK-native composite-signal history, which is not computed yet - the 8 composite signals, regime history and analogue engine are NYSE-panel concepts. See the same section in the US report; HK-native signals are tracked as a strategic item in the design notes.

Section 13 - Sector Forecast - Expected Leaders (Next 21 Days)

Heuristic bucket-level companion to ?11: the mean Leadership Persistence Score per bucket. Not the analogue engine.

Insufficient RS history for a bucket persistence ranking.

Section 14 - Forecast Scorecard - Actual vs Forecast

The scorecard grades published forecasts once their horizon elapses. The HK report's only forecast is the heuristic Leadership Persistence ranking (?11/?13, wishlist W6), which has no realized-return grading layer yet - so there is nothing to score here.

Section 15 - Top Strengthening Assets

Symbol	r_d	r_w	r_m	RS rank	DRS(1d)	DRS(5d)	D2RS(5d)
1398.HK	-0.83%	+3.27%	-	-	-	-	-
0700.HK	-0.87%	+2.91%	-	-	-	-	-
3690.HK	+0.45%	+2.59%	-	-	-	-	-
0005.HK	+2.08%	+2.43%	-	-	-	-	-
0939.HK	-0.78%	+1.70%	-	-	-	-	-

DRS = velocity (rank change); D2RS = acceleration (change in velocity). Acceleration often turns before raw RS does - the earliest leading signal.

Section 16 - Top Weakening Assets

Symbol	r_d	r_w	r_m	RS rank	DRS(1d)	DRS(5d)	D2RS(5d)
0883.HK	-2.93%	-9.00%	-	-	-	-	-
9988.HK	-0.82%	-8.22%	-	-	-	-	-
0857.HK	-3.54%	-6.77%	-	-	-	-	-
1810.HK	+0.23%	-4.18%	-	-	-	-	-
9888.HK	-0.78%	-1.13%	-	-	-	-	-

Section 17 - Sector / Bucket Breadth

- Universe-wide: **40.0%** advancing, **60.0%** declining (net -20.0pp).

Bucket	n	adv % (r_w)	mean r_w	mean r_m	risk tag
HK Financials	5	80%	+1.78%	-	risk_on
HK Broad	2	100%	+0.82%	-	risk_on
HK Internet	6	33%	-1.48%	-	risk_on
HK Energy	2	0%	-7.88%	-	neutral

Breadth often shifts before price - a bucket whose r_w mean is flat but with 80% advancing is being accumulated; the opposite is being distributed.

Section 18 - Volume Anomalies

No symbol exceeded +/-2sigma on log-volume z-score.

Section 19 - ETF Flow Analysis

HK Index ETFs

Flow history accumulated: **1 day(s)**. Same 60-day flow-z normalization as the US panel; until then deltas are raw.

ETF	Source	Conf.	Shares Out	AUM (HKD~)	Net Flow (HKD~)
2800.HK	shares_delta	0.60	3,155,990,016	\$79,657,187,281	-
2828.HK	shares_delta	0.60	345,543,722	\$29,854,978,076	-

AUM / Net Flow are reported in the close-quote currency (HKD for HK-listed ETFs). The aum_usd column name is legacy - the value is shares_outstanding x close_quote_currency.

Stock Connect - Southbound (Mainland -> HK)

No Southbound flow data yet. Once stock_connect_adapter.fetch_and_store_all has run (akshare/Eastmoney source), the last 7 sessions will surface here.

Top Southbound Holders - Universe (5-day D market value)

No Southbound per-stock holdings data yet. Once `stock_connect_adapter.refresh_holdings` has run, this table will show which HK names Mainland investors are accumulating.

China Policy & Liquidity

No China macro data yet. Once `china_macro_adapter.fetch_and_store_all` has run, the PBOC policy + SHIBOR table will populate here.

Section 20 - Detected Themes

Requires HK-native composite-signal history, which is not computed yet - the 8 composite signals, regime history and analogue engine are NYSE-panel concepts. See the same section in the US report; HK-native signals are tracked as a strategic item in the design notes.

Section 21 - Signal Attribution

Requires HK-native composite-signal history, which is not computed yet - the 8 composite signals, regime history and analogue engine are NYSE-panel concepts. See the same section in the US report; HK-native signals are tracked as a strategic item in the design notes.

Section 22 - What Changed Since Yesterday

Insufficient RS history for this horizon.

Section 23 - What Changed Since Last Week

Insufficient RS history for this horizon.

Section 24 - What Changed Since Last Month

Insufficient RS history for this horizon.

Section 25 - Potential Explanations

Rule-based observations (no LLM pass for HK yet). Hedged by design.

- The data is consistent with money leaving **HK Energy** (r_w -7.88%, breadth 0% advancing).
- The data is consistent with money entering **HK Financials** (r_w +1.78%, breadth 80% advancing).

Section 26 - Confidence Assessment

- Names with a bar on the latest HKEX session: **15/15**
- Median history depth: **7 sessions** (min 7, RS rank needs >=63 for the full blend)
- Session freshness: HKEX 2026-06-15 vs report date 2026-06-15 (0 calendar day(s) gap)

The US report averages composite-signal confidences here; HK composites are not computed, so this section reports data coverage instead - the floor on which every section above stands.

Section 27 - Glossary

Only abbreviations actually used in this report are listed; the full universe glossary lives in `glossary.py`.

Metrics & signal short-forms

Term	Meaning
r_d	Daily log return - $\ln(\text{close}_t / \text{close}_{\{t-1\}})$.
r_w	Weekly log return - 5 trading days. Rolling, not calendar week.
r_m	Monthly log return - 21 trading days.
RS rank	Relative Strength rank, 1-99, IBD-style cross-sectional percentile of blended-horizon return ($0.4.r_m + 0.3.r_w + 0.2.r_q + 0.1.r_d$). At N=17 assets the rank is interpolated and best read as a coarse leader/laggard tag.

Term	Meaning
DRS(1d)	Change in RS rank over the past 1 trading day. Velocity at the shortest horizon - noisy by design, useful for spotting same-day flips.
DRS(5d)	Change in RS rank over the past 5 trading days. Velocity at the canonical horizon.
D2RS(5d)	Acceleration - change in 5d-velocity vs 5d ago. Positive D2RS = leadership building; negative = leadership rolling over. Often turns before raw RS does.
Bucket	Editorial group of related symbols (Technology = XLK+SMH; Crypto = BTC+ETH; etc.). Used by the Capital Flow Dashboard and Flow Map.
Rotation Strength	capital_rotation -> 0-100, with percentile vs trailing 252d. Tells you how unusual today's rotation magnitude is.
risk tag	Bucket classification: risk_on / defensive / neutral / stress. Used by Flow Map to color-code direction.
Capital Rotation	5-pair block momentum spread (equities-vs-bonds, growth-vs-defensives, semis-vs-staples, US-vs-international, crypto-vs-gold). Positive = rotation into risk.
Liquidity	0-100 magnitude composite of UUP-inv + SPY-vol-inv + BTC + MOVE-inv + RRP-inv (the last two are added when MOVE / FRED are wired).

Tickers referenced

Ticker	Description
0005.HK	HSBC Holdings - HK-listed global bank with deep Asia exposure.
0388.HK	Hong Kong Exchanges and Clearing (HKEX) - operator of the HK stock exchange.
0700.HK	Tencent Holdings - HK-listed Chinese tech / internet giant.
0857.HK	PetroChina - HK-listed Chinese state oil giant.
0883.HK	CNOOC - HK-listed Chinese national offshore oil company.
0939.HK	China Construction Bank - HK-listed, one of the 'Big Four' Chinese banks.
1398.HK	Industrial and Commercial Bank of China (ICBC) - HK-listed, largest Chinese bank by assets.
1810.HK	Xiaomi - HK-listed Chinese consumer electronics.
2318.HK	Ping An Insurance - HK-listed Chinese insurance / fintech.
2800.HK	Tracker Fund of Hong Kong - Hang Seng Index ETF.
2828.HK	Hang Seng China Enterprises ETF (HSCEI / H-shares index).
3690.HK	Meituan - HK-listed Chinese local-services / food-delivery.
9618.HK	JD.com - HK-listed Chinese e-commerce.
9888.HK	Baidu - HK-listed Chinese search / AI.
9988.HK	Alibaba Group - HK-listed (primary listing since 2019).
KWEB	KraneShares CSI China Internet ETF - US-listed proxy for China internet names (Tencent, Alibaba, Meituan via H-shares).
QQQ	Invesco QQQ Trust - Nasdaq-100 (tech-heavy growth proxy).
SPY	SPDR S&P 500 ETF - US large-cap equity (the headline US risk read).
XLF	Financial Select Sector SPDR Fund.

Appendix - Per-Ticker Detail

Ticker	Bucket	Last close (HKD)	r_d	r_w	r_m	RS	DRS(5d)
2800.HK	HK Broad	25.24	+0.64%	+1.04%	-	-	-
2828.HK	HK Broad	86.40	-0.12%	+0.60%	-	-	-
0857.HK	HK Energy	9.99	-3.54%	-6.77%	-	-	-
0883.HK	HK Energy	24.20	-2.93%	-9.00%	-	-	-
0005.HK	HK Financials	145.80	+2.08%	+2.43%	-	-	-

Ticker	Bucket	Last close (HKD)	r_d	r_w	r_m	RS	DRS(5d)
0388.HK	HK Financials	386.80	+1.62%	+0.00%	-	-	-
0939.HK	HK Financials	8.91	-0.78%	+1.70%	-	-	-
1398.HK	HK Financials	7.16	-0.83%	+3.27%	-	-	-
2318.HK	HK Financials	57.70	+0.96%	+1.48%	-	-	-
0700.HK	HK Internet	459.60	-0.87%	+2.91%	-	-	-
1810.HK	HK Internet	26.26	+0.23%	-4.18%	-	-	-
3690.HK	HK Internet	78.25	+0.45%	+2.59%	-	-	-
9618.HK	HK Internet	112.50	-0.09%	-0.88%	-	-	-
9888.HK	HK Internet	114.70	-0.78%	-1.13%	-	-	-
9988.HK	HK Internet	109.30	-0.82%	-8.22%	-	-	-

Returns are computed on each ticker's own HKEX trading days; RS rank is cross-sectional across the HK universe only.
